- **ECG et ETT: RAS**

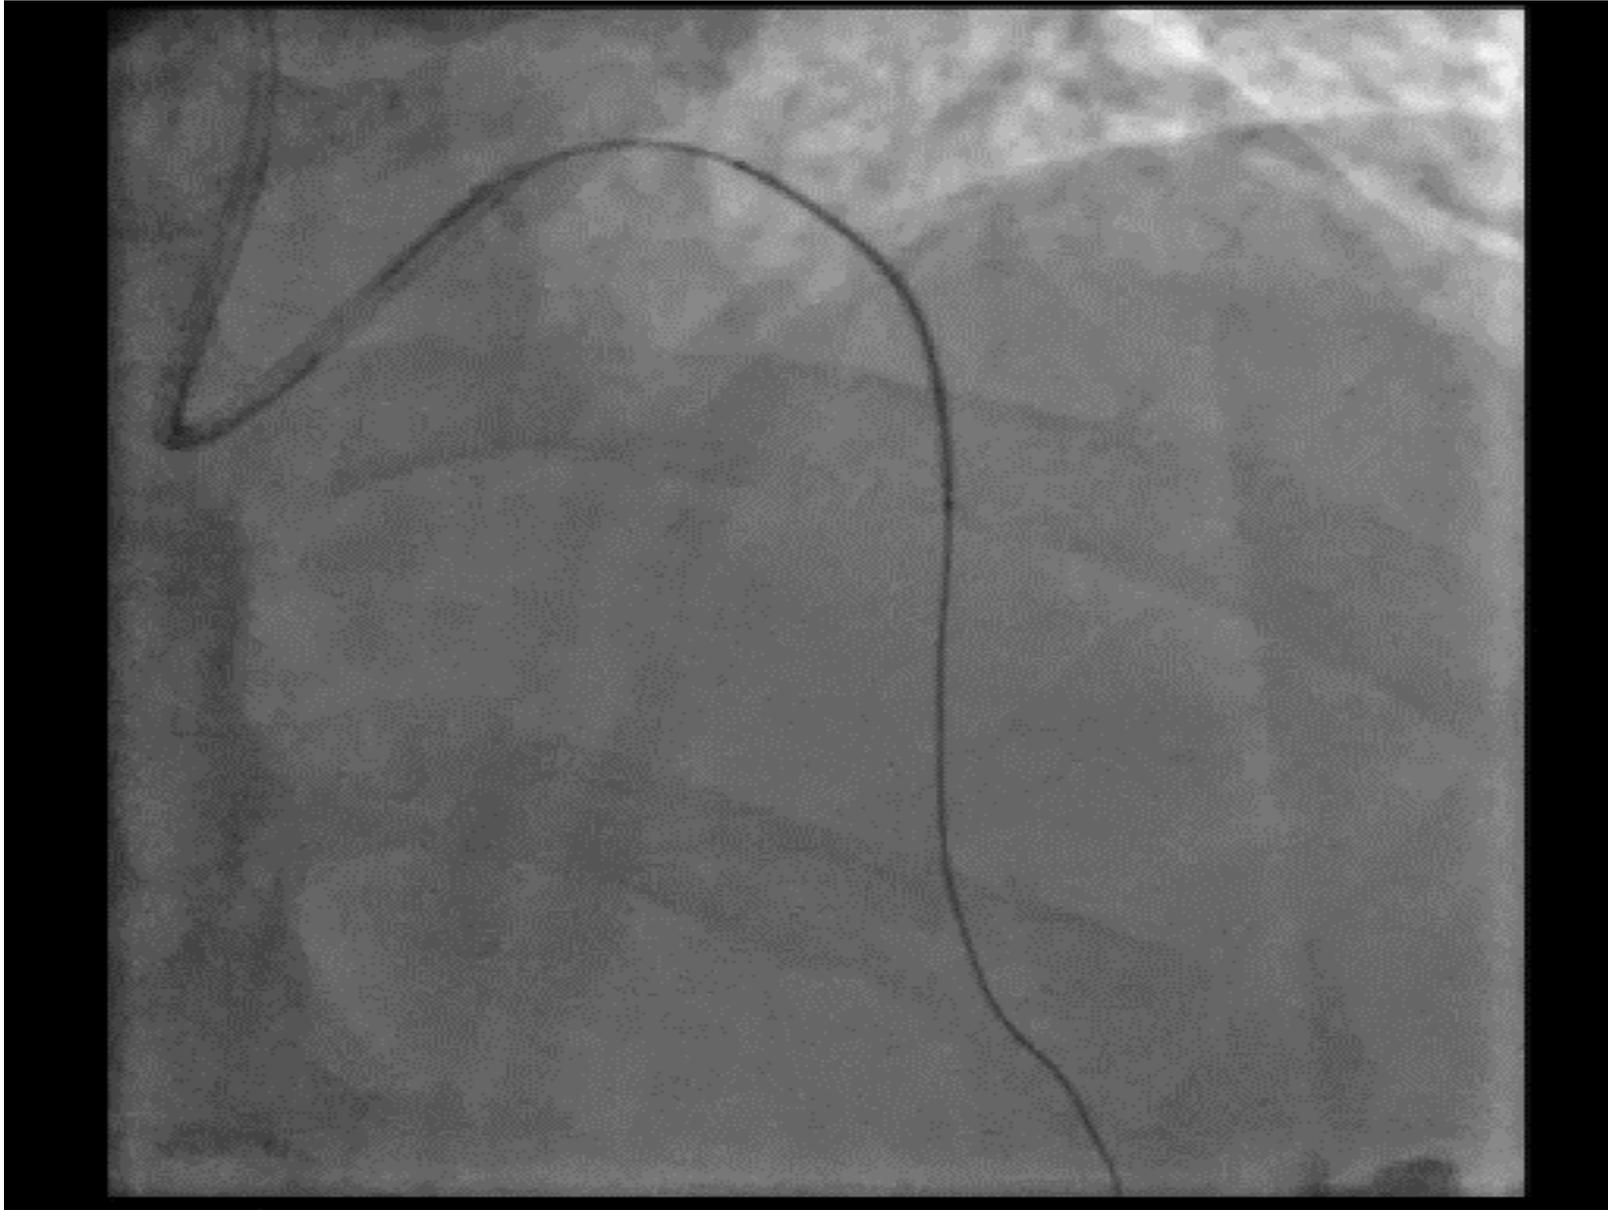

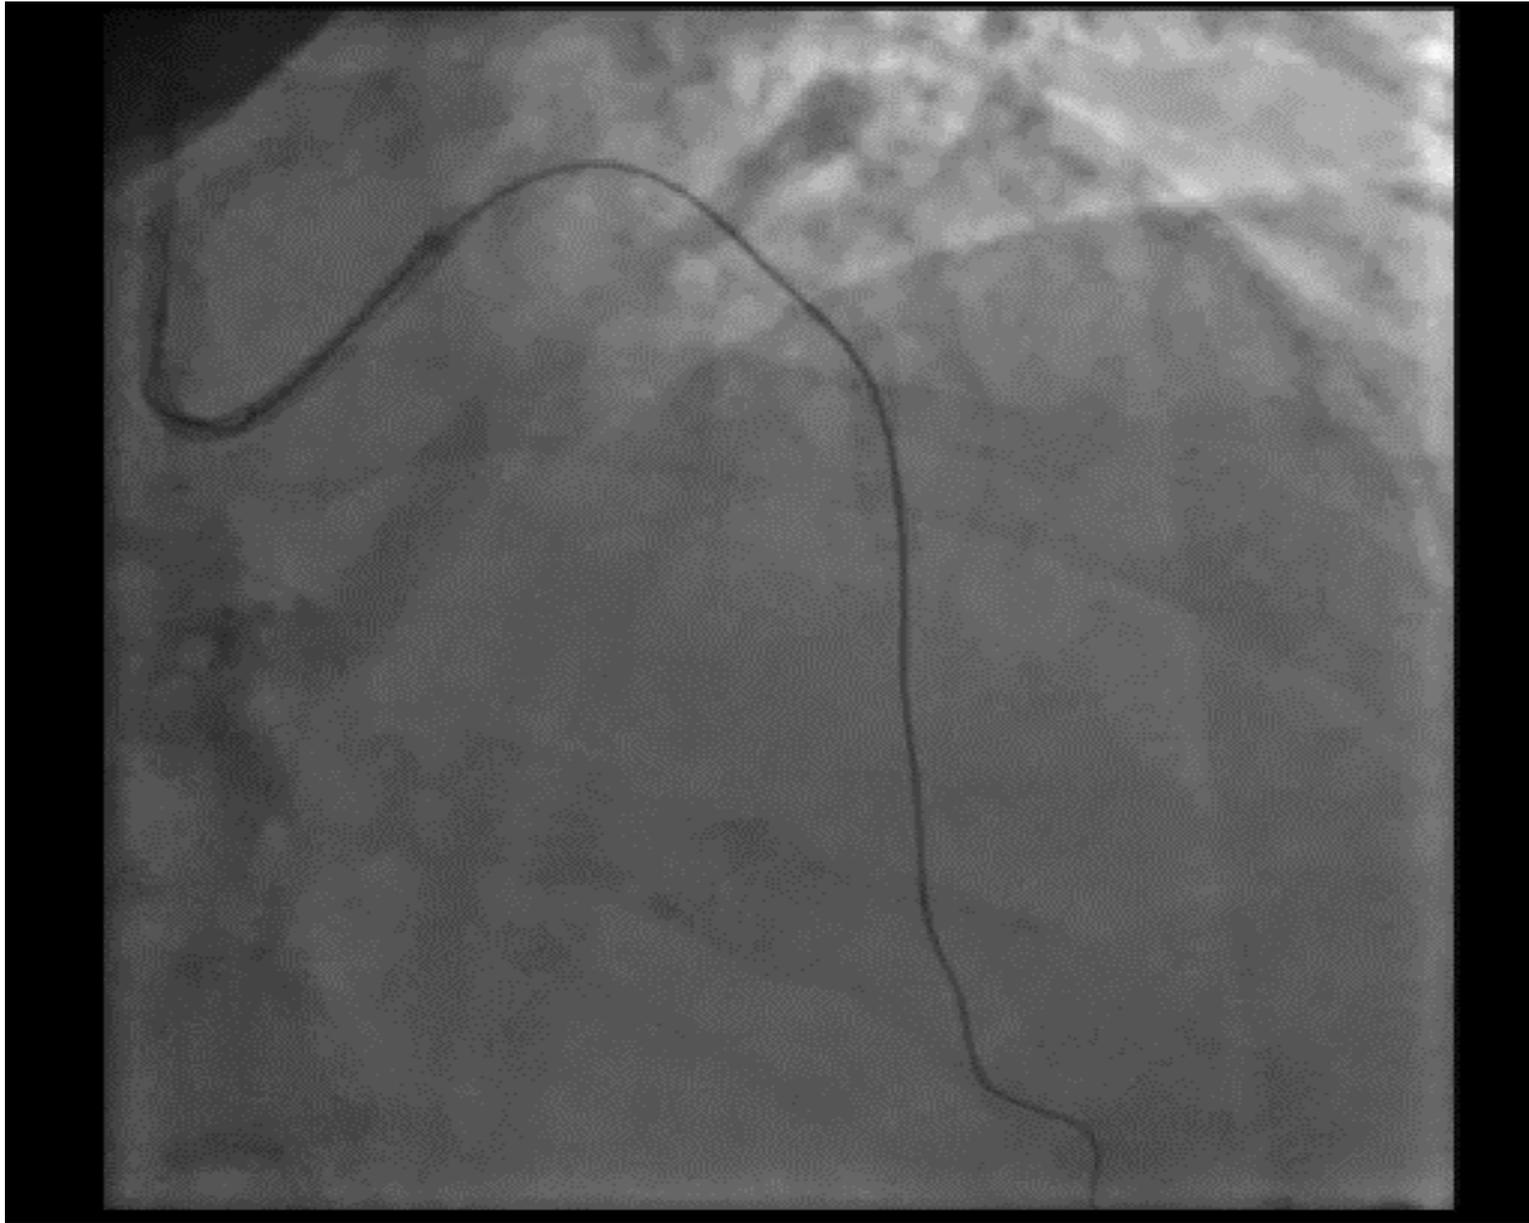

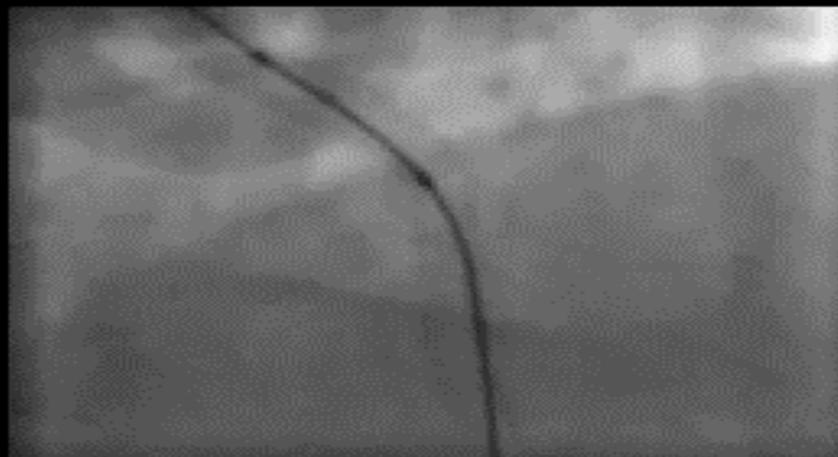

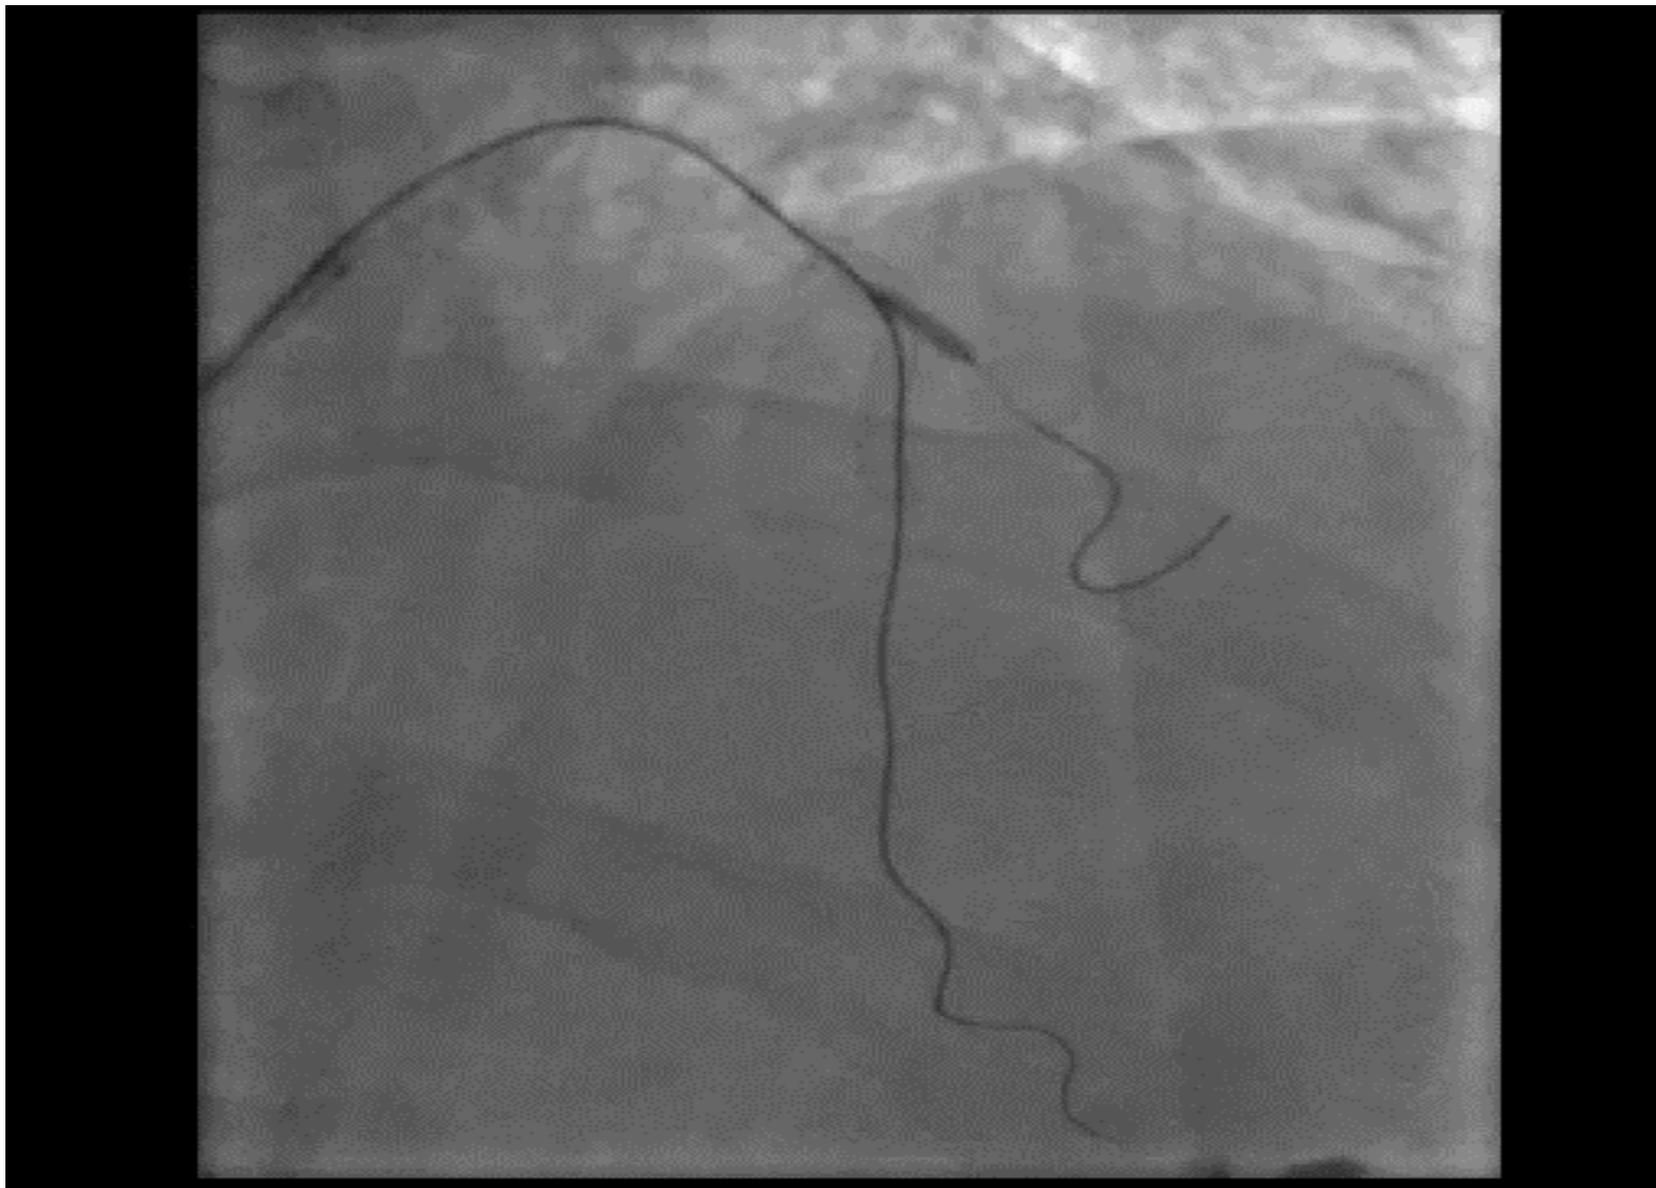

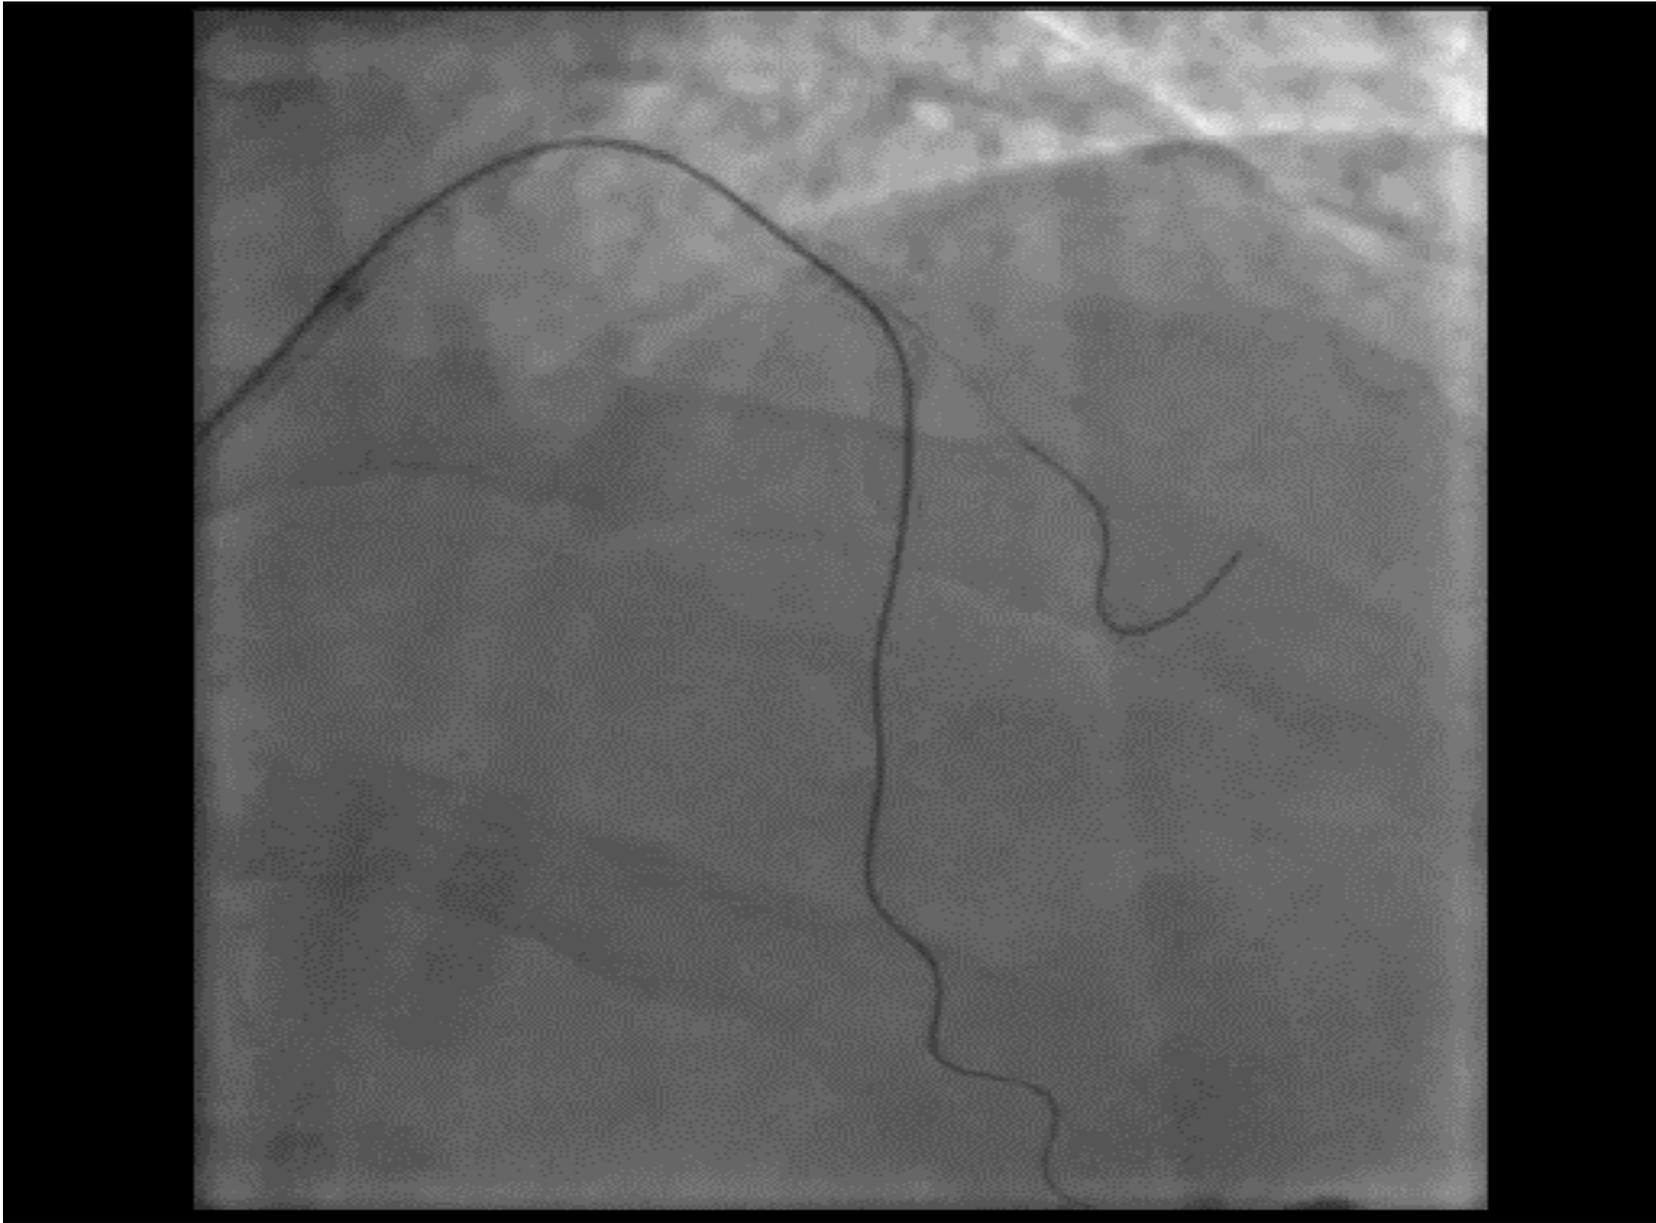

Stent 3.0x34 mm

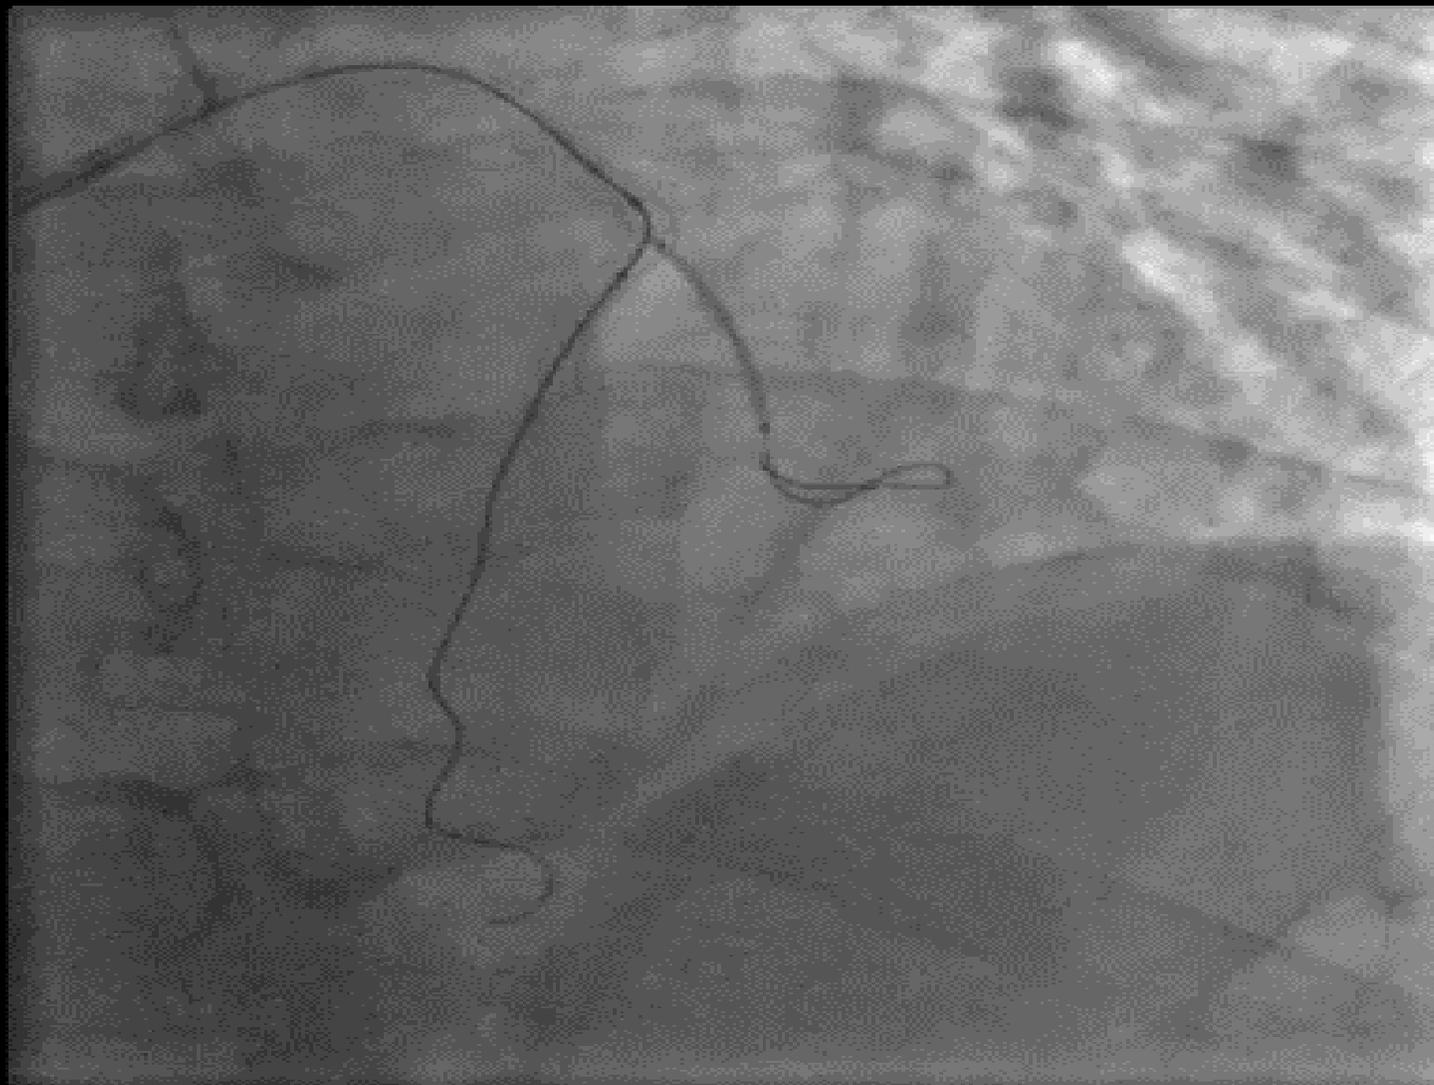

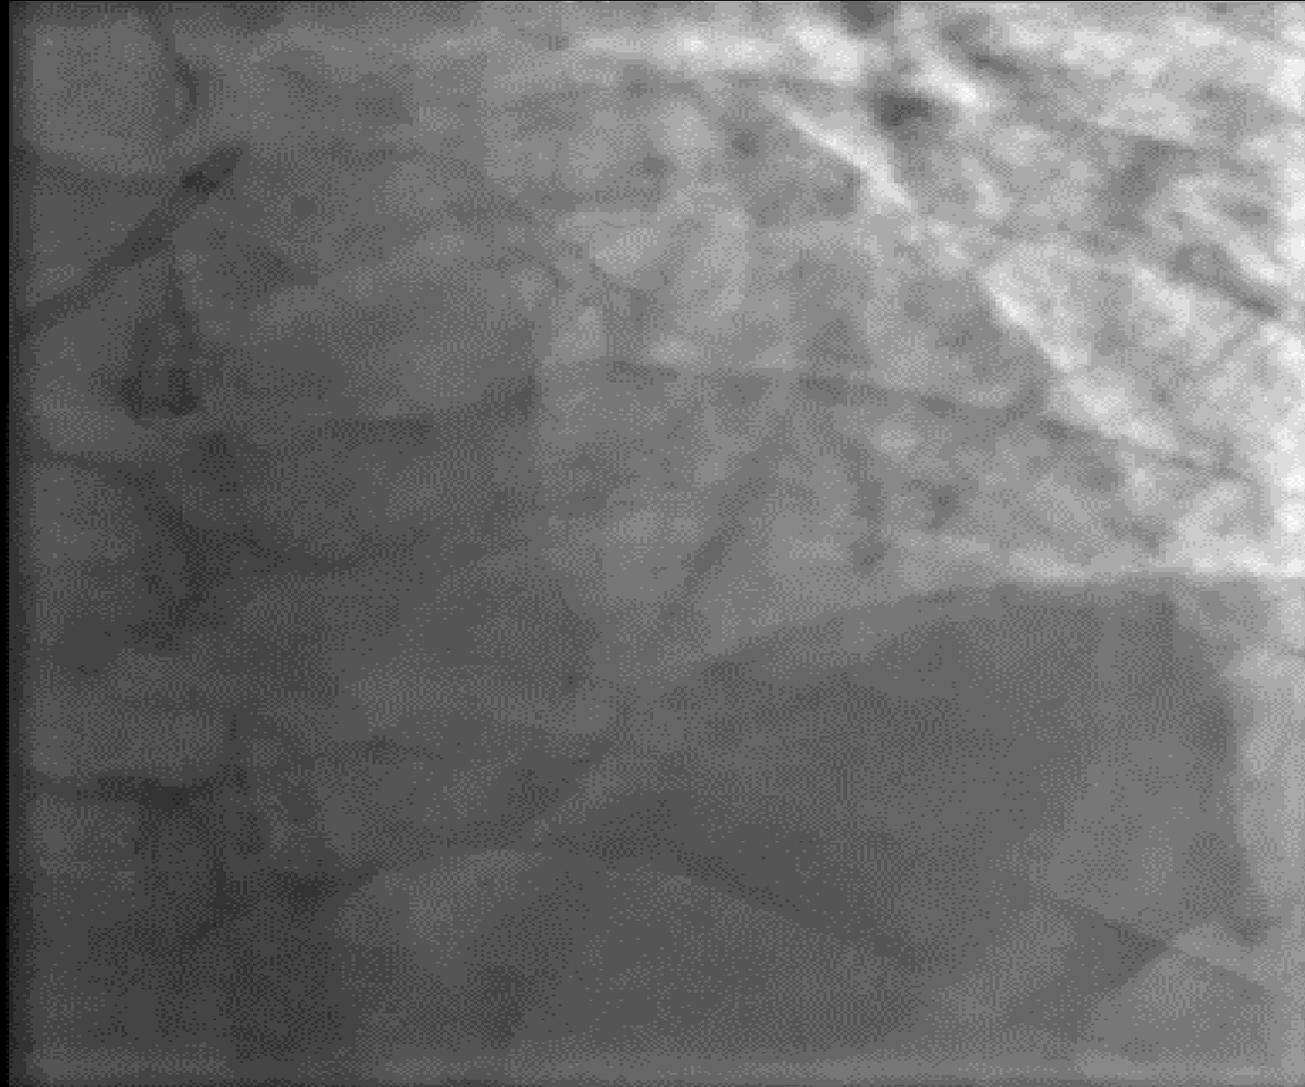

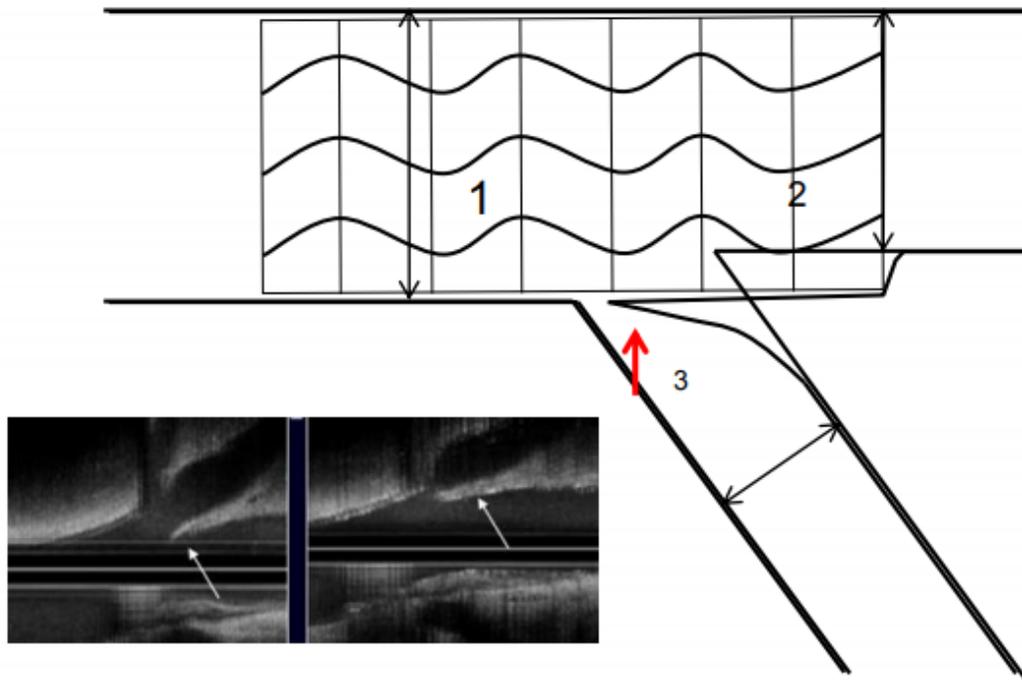

Stent 2,5x22mm

# Stent sizing in provisional technique

Que s'est-il passé?

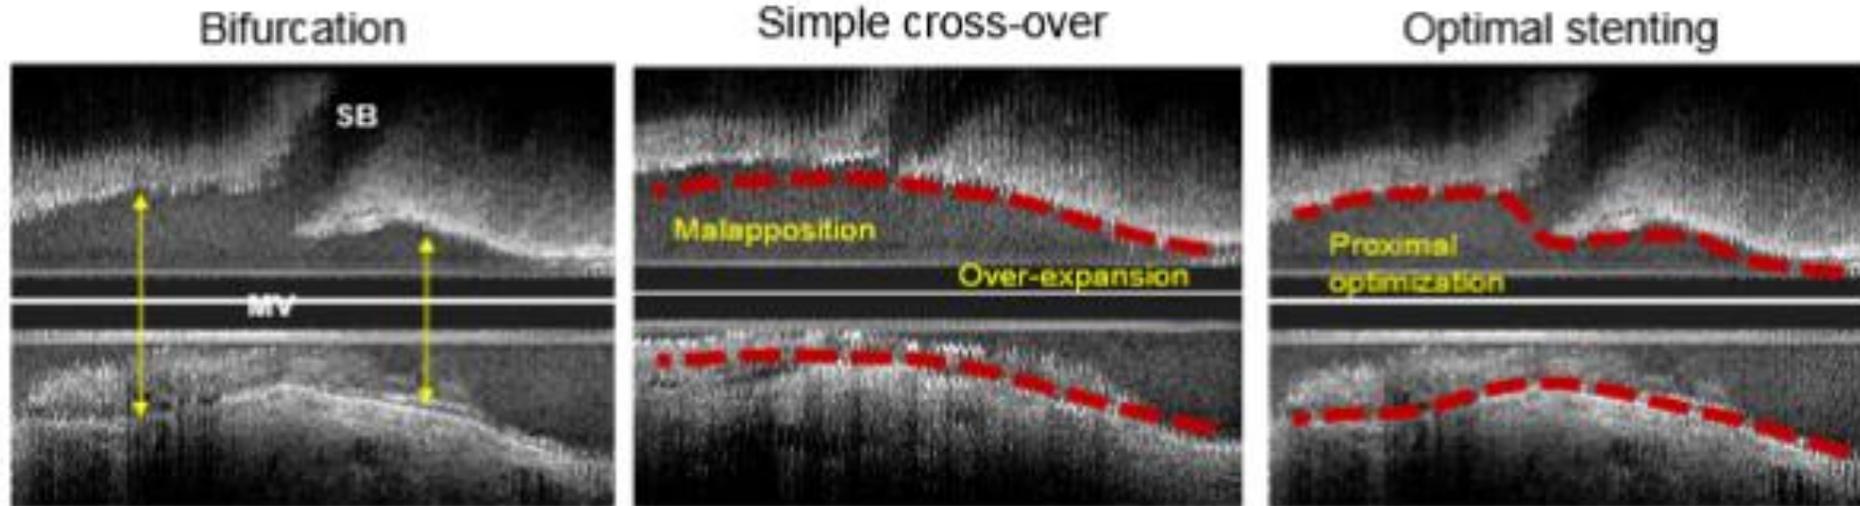

***$D_2$  has to be reference stent choice diameter***

## Vessel size relationship

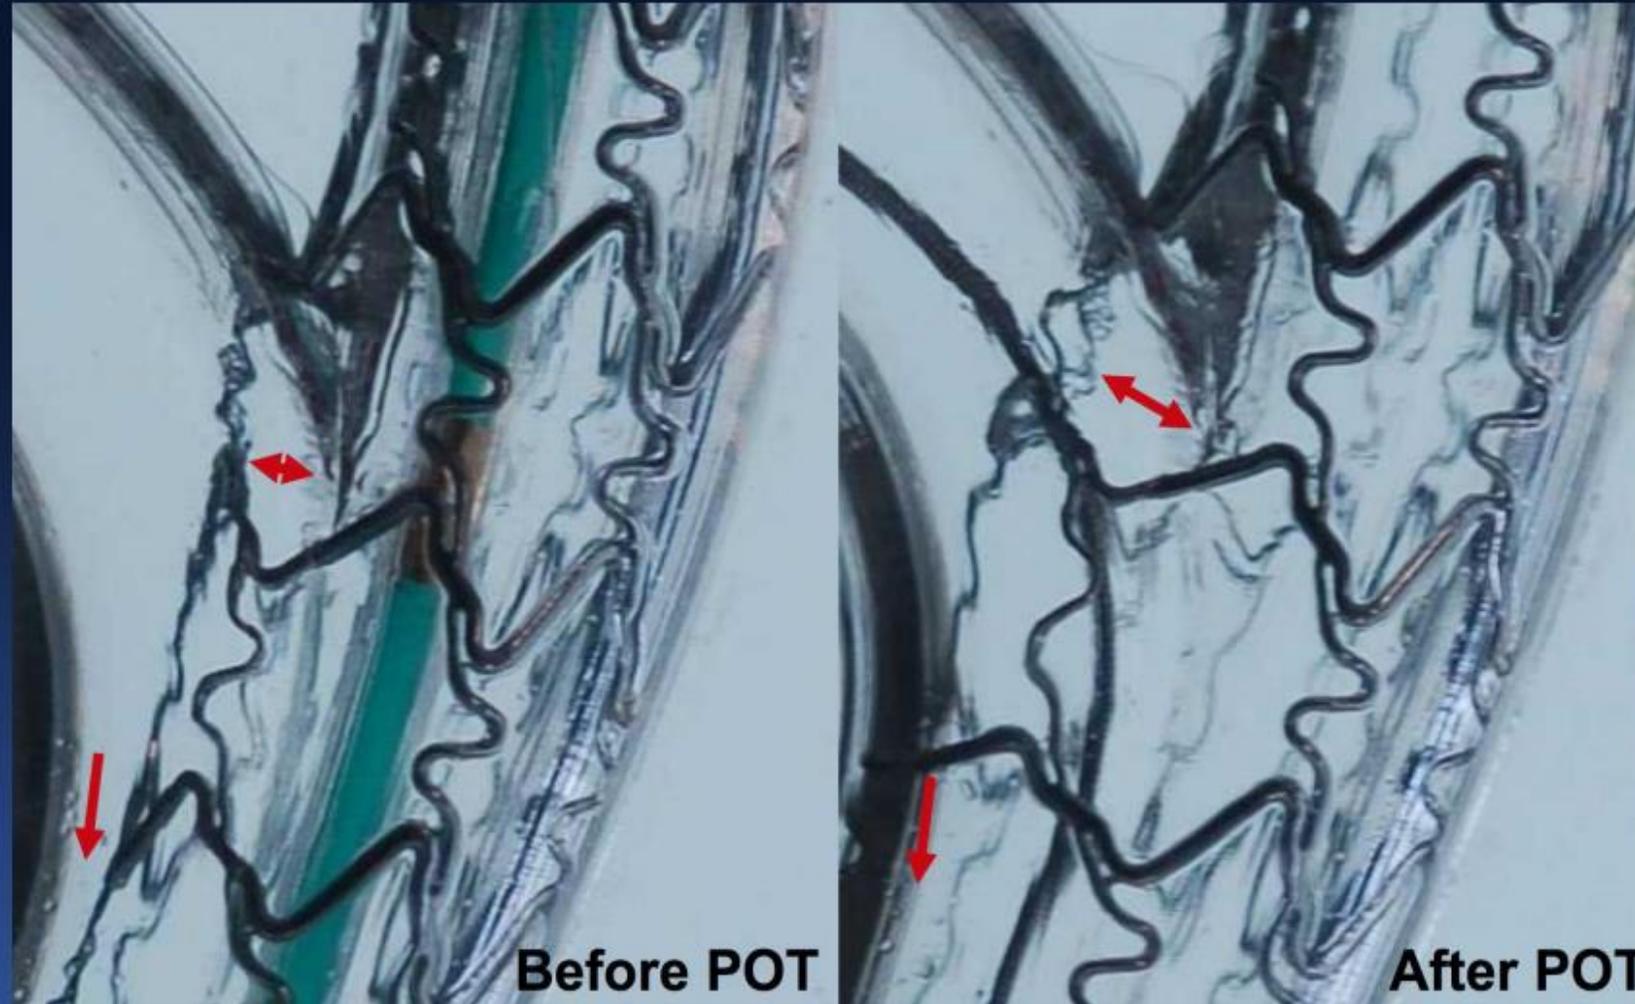

### Inferences

- 1) Simple cross-over will end up with proximal malapposition and distal over-expansion
- 2) For optimal stenting, we need proximal optimization after stenting sized to distal MV

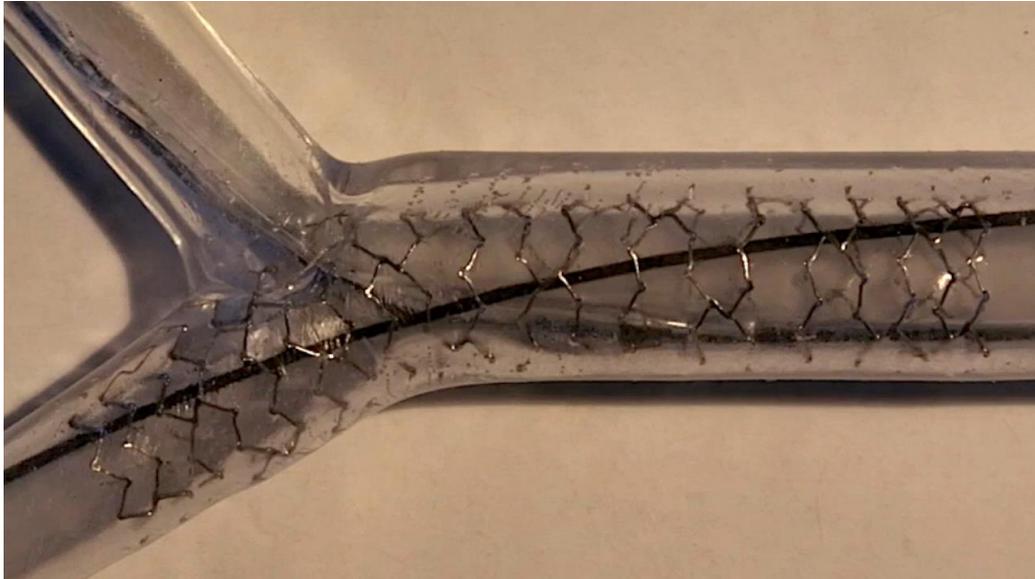

MV = main vessel, SB = side branch

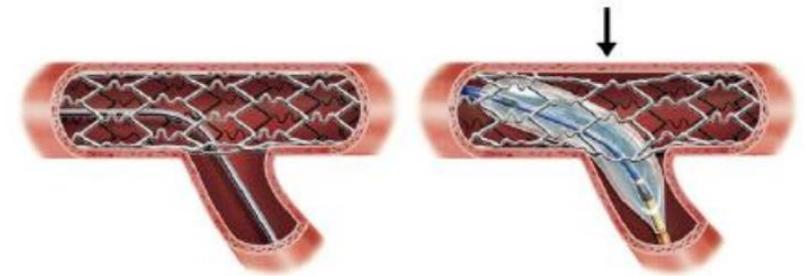

# POT: Faciliate distal crossing

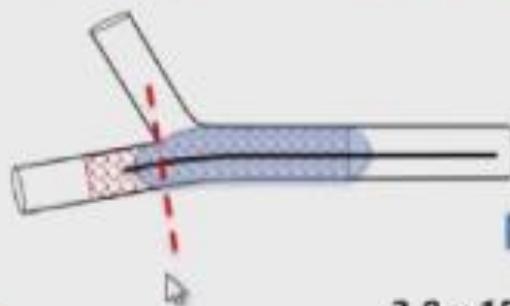

# The re-POT sequence

SB fenestration → Stent distortion → need for KBT

# What balloon positioning for POT ?

## Compliant Balloons

3.0 x 15 mm *TREK™* (Abbott)

3.0 x 15 mm *Maverick™* (Boston)

3.0 x 15 mm *Euphoro™* (Medtronic)

3.0 x 15 mm *Hityu™* (Terumo)

distal

## Non-compliant Balloons

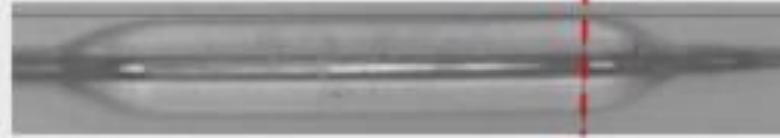

3.0 x 15 mm *TREK NC™* (Abbott)

3.0 x 15 mm *Emerge™* (Boston)

3.0 x 15 mm *Euphoro NC™* (Medtronic)

3.0 x 15 mm *Accuforce™* (Terumo)

\*P value between re-POT and no POT+symFKBi

## RESULTS

Comparison of ellipticity index, global malapposed strut ratio (%), and strut obstruction ratio in side branch ostium (SBO) (%)

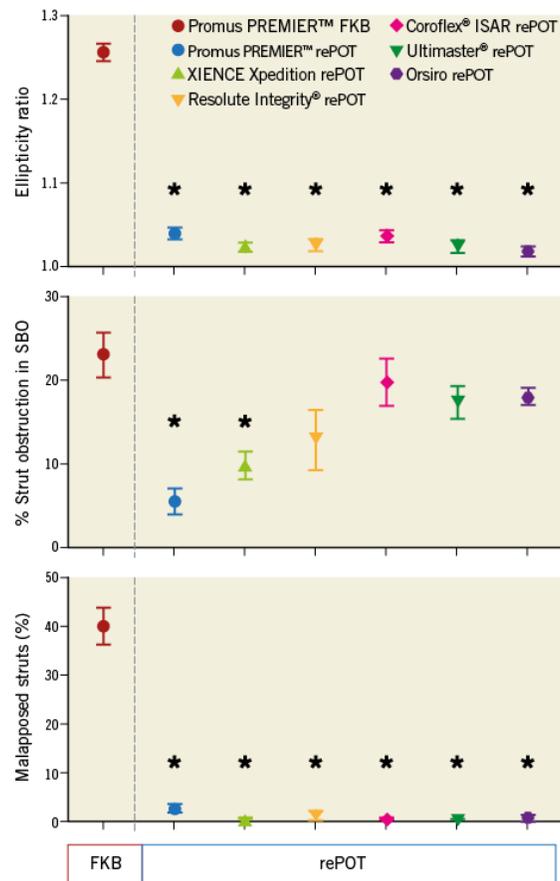

POT-side-POT was better than FKB in terms of ellipticity, malapposition, and SB obstruction
